Recipe

- Computer running either Windows 7 or later or MacOS 10.10 or later.
- ✓ the NUX MG-400.
- ✓ USB-C data/sync cable (Included).
- NUX ACD-006A Power Supply (Included)
- Quality USB-C to USB adapter (If your computer only comes with USB-C ports.)
- ✓ A little patience ¹

Q&A

1. What is the "NUX Device Updater"?

It's a utility software that can get various NUX effect pedals' firmware updated, it's green and safe to run on your computer.

2. What does "DFU" and "DFU mode" stands for?

In our case, "DFU" is short for **D**evice **F**irmware **U**pdate, and you have to put your NUX pedal into DFU mode before the "NUX Device Updater" can detect and connect to it without getting "No Device Found" error.

3. How to put the NUX MG-400 into DFU mode?

Keep holding down the [**DOWN**] & [**CTRL1**] footswitches while turning on the [**POWER**] switch.

4. Is it necessary to get the firmware updated?

It is necessary when you want to explore the new features that comes with the new firmware, and if you need to tweak the NUX MG-400 with its editor software.

Step by step Guide

- 1. Download the firmware update kit & Install the NUX Device Updater.
 - 1.1 Download the firmware update kit from the NUX MG-400 product page.
